

DETAILS OF FIRMWARE CHANGES

The CG-6 Autograv™ firmware version 20170705-1 has the following additions and changes:

User Interface Additions/Changes:

- Added +/- buttons to the main screen for easy station change
- Added "Alert length" number of seconds that the levelling arrows will flash purple when the reading is complete
- "Recall" menu remembers last page viewed

Survey Additions/Changes:

- Added 15 second measurement duration to selectable list
- Enhanced "stations.txt" functionality, now imports name, positions, lines.
- Added Line integer variable with a range of +/-32000
- Added auto increment feature
- Added new "Standard" and "Numeric" station styles. "Numeric" styles supports variable increments.

GPS Enhancements:

- Added "Get Pos" which saves elevation into the data set
- Added Distance to current station in km

Data File corrections:

- Filtered data file (.dat) now has temperature scale in the header
- TSF file correction on header, TIDE now named TIDE_CORR
- 10 Hz sampling order error corrected effecting the high frequency spectrum in tsf files only
